DAYLILY CULTURE

Daylilies will grow in any good garden soil and are very drought resistant. However, they appreciate plenty of water and nourishment during the growing season.

Although they will grow and flower in partial shade, they should have at least a half day of sun to have strong stems and many flowers.

There are few troubles or diseases that plague daylilies. They are rapidly becoming one of the leading perennials in America. We think you will find them delightful garden subjects and also excellent for cutting and flower arrangements.
